Proceedings of the
British Machine Vision Conference
University of Oxford

24–27 September 1990

The papers appearing in this volume comprise the Proceedings of the 1990 Conference of the British Machine Vision Association. They reflect the authors' opinions and are published as presented and without change in the interests of timely dissemination. Their inclusion here does not necessarily constitute endorsement by the BMCV90 Conference Committee, the BMVC90 Programme Committee or the British Machine Vision Association.

H Trivedi

Table of Contents

INVITED PAPERS

SESSIONS I and VII

Technology innovations and product design issues in machine vision: The Technical Arts Corporation experience
S White xi

On the computational neurobiology of curve detection
S W Zucker, A Dobbins and L Iverson xvii

PAPERS

SESSION II: Model-based Vision 1

Transformational invariance - a primer
D A Forsyth, J L Mundy and A Zisserman 1

Relative motion and pose from invariants
A Zisserman, C Marinos, D A Forsyth, J L Mundy and C A Rothwell 7

Feature grouping in a hierarchical probabilistic network
W Dickson 13

SESSION III: Stereo Metrology

Epipolar geometry for trinocular active range-sensors
A Blake, D McCowen, H R Lo and D Konash 19

Optimal combination of stereo camera calibration from arbitrary stereo images
N A Thacker, J E W Mayhew 25

Recovering partial 3D wire frame descriptions from stereo data
S B Pollard, J Porrill and J E W Mayhew 31

Curve matching and stereo calibration
J Porrill and S B Pollard 37

SESSION IV: Feature Extraction 1

Robust estimation of shape parameters
G A Jones, J Princen, J Illingworth and J Kittler 43

Active intelligent vision using the dynamic generalized Hough Transform
V F Leavers 49

A probabilistic approach to the Hough Transform
R S Stephens 55

Shape verification using belief updating
C J Taylor and D H Cooper 61

SESSION VI: Motion 1

Resolution of the Bas-relief ambiguity in structure-from-motion under orthographic projection
C Harris 67

RAPID - a video rate object tracker
C Harris and C Stennett 73

Kalman filtering of pose estimates in applications of the RAPID video rate tracker
R Evans 79

Determining motion from 3D line segment matches: a comparative study
Z Zhang and O D Faugeras 85

PAPERS continued

SESSION VII: Feature Extraction 2

Optimal probabilistic relaxation labeling
I Poole 91

Construction of a scale-space primal sketch
T Lindeberg and J Eklundh 97

Feature grouping by 'relocalisation' of eigenvectors of the proximity matrix
G L Scott and H C Longuet-Higgins 103

SESSION VIII: Motion 2

Computation of discontinous optical flow by domain decomposition and shape optimization
C Schnörr 109

Towards qualitative vision: motion parallax
A Blake, R Cipolla and A Zisserman 115

Using a combined stereo/temporal matcher to determine ego-motion
N A Thacker, Y Zheng and R Blackbourn 121

Integration of stereo and motion
E Sparks and M Stephens 127

SESSION IX: Medical Image Understanding

A model-based approach to the reconstruction of three dimensional arteries from biplane angiograms
S T Rake, K D Baker and G D Sullivan 133

Edge-region integration for segmentation of MR images
G J Brelstaff, M C Ibison and P J Elliott 139

Model-based interpretation of anatomical structures in cranial MR images
C I Attwood, G D Sullivan, G P Robinson, K D Baker and A C F Colchester 145

The use of the grey level SAT to find the salient cavities in echocardiograms
D R Bailes 151

SESSION XI: Applications and Hardware

Automatic inspection of surface mount solder joints using X-ray images
E Griffiths and R Jordan 157

A distributed blackboard system for vision applications
M D Brown and R B Fisher 163

A multiprocessor 3D vision system for pick and place
M Rygol, S B Pollard and C Brown 169

A fast algorithm for computing optic flow and its implementation on a Transputer array
H Wang, J M Brady and I Page 175

PAPERS continued

SESSION XII: Shape from X and Surface Reconstruction

Shape from texture:textural invariance and the problem of scale in perspective images of textured surfaces
J V Stone 181

Calculating the surface topography of integrated circuit wafers from SEM images
T P Ellison and C J Taylor 187

Integrating stereo and photometric stereo to monitor the development of glaucoma
S Lee and J M Brady 193

Stereoscopic recovery and description of smooth textured surfaces
P F Mclauchlan, J E W Mayhew and J P Frisby 199

Reconstruction of visual appearance
P R J North 205

SESSION XIII: Model-based Vision 2

3-D object recognition and orientation from both noisy and occluded 2-D data
D P Illing, P T Fairney and R J Wiltshire 211

Model based 3D grouping by using 2D cues
S Zhang, L Du, G D Sullivan and K D Baker 217

3-D cues from a single view: detection of elliptical arcs and model-based perspective backprojection
S Masciangelo 223

Using geometrical rules and a priori knowledge for the understanding of indoor scenes
C Coelho, M Straforini and M Campani 229

SESSION XIV: Segmentation

Texture segmentation for defining driveable regions
A Grunes and J F Sherlock 235

Extracting second-order topograhic surface features from range data
R B Fisher 241

Segmentation of planar curves using local and global behaviour analysis
L-D Cai, J Porrill, S B Pollard, J E W Mayhew and J P Frisby 247

POSTERS

SESSIONS V and X

Combining cues for mammographic abnormalities
S M Astley and C J Taylor 253

Prediction of stereo disparity using optical flow
P A Beardsley, J M Brady and D W Murray 259

Model based segmentation of radiological images of the cranium
M G Cawley and K Natarajan 265

An empirical study on the effects of spatial discretization error in a stereo vision system
K L Chan and A K Forrest 271

An uncalibrated stereo visual servo system
A Conkie and P Chongstitvatana 277

Depth extraction by focal/aperture variation
S R Daniel 281

An analysis of hole detection schemes
E R Davies and S P Barker 285

An intelligent visual task system for lateral skull X-ray images
D N Davies and C J Taylor 291

Classifying symmetry sets
M M Fleck 297

On recognition of features in polyhedral scenes
P Grossmann 303

Simultaneous region and edge segmentation of infrared images using non-maximal suppression for edge thinning
J F Haddon and J F Boyce 309

Evaluation of a real-time kinetic depth system
G M Hayes and R B Fisher 315

Symbolic image matching by simulated annealing
L Hérault, R Horaud, F Veillon and J Niez 319

Parabolic and hermite cubic finite elements: a flexible technique for deformable models
P Karaolani, G D Sullivan and K D Baker 325

Digital or analog Hough Transform?
N Kiryati, M Lindenbaum and A M Bruckstein 331

Robust grouping of intensity changes in outdoor scenes by a histogram and graph based method
A Korn 337

The computation of deformation and rotation in stereopsis
K Langley, B J Rogers and J M Brady 343

Filter based estimates of depth
S J Maybank 349

A test of camera noise models
A M McIvor 355

A head called Richard
P Mowforth, P Siebert, Z P Jin and C Urquhart 361

Integrating visual search with visual memory in a knowledge directed image interpretation system
T P Pridmore and S H Joseph 367

POSTERS continued

Interpreting trihedral vertices by using assumptions about the angles between the edges 373
G Probert and R Cowie 373
Perceptual grouping of circular arcs under projection
P L Rosin and G A W West 379
A parallel path planning algorithm for mobile robots
C Shu and H Buxton 383
Robust ego-motion estimation
D A Sinclair, A Blake and D W Murray 389
Active contours in medical image processing using a networked SIMD array processor
G D Sullivan, A D Worrall, R W Hockney and K D Baker 395
A knowledge based system for measuring faces
D Tock, I Craw and R Lishman 401
An application of active contour models to head boundary location
J B Waite and W J Welsh 407
Fast object recognition using a hybrid optical/digital processor
D J F Walker and C R Chatwin 413
Segmentation coding using edge detection and region merging
Y Yu 419
